## Clarification No 2

**Reference:** Open call for tenders No EEA/IEA/14/016

**Title:** Expert assistance with indicators, analysis, assessments and policy evaluation in support of the 7<sup>th</sup> Environmental Action Programme

### Question 1

It is currently not clear how to fill out the table presenting the technical experience of the team (Annex 5).

In the last column, the document requires:

"Areas of expertise necessary for the monitoring and evaluation of the 7EAP and in line with its 9 priority objectives as well as its long term vision. Please indicate the area of expertise in brackets after the name of the expert (see last bullet in section 11.2.3 of the tender specifications)."

What areas of expertise shall be provided for this column?

### Answer 1

*Please refer to the examples listed in section 11.2.3 of the tender specifications, first bullet point Human resources, (i), last bullet (page 11 of 15), namely environmental and climate policies and the environmental media involved (e.g. air, water, soils, etc.), socio-economic drivers of environmental change and relevant sector policies (e.g. transport, agriculture, energy), analysis of Europe's environment in the global context (particularly footprints from consumption and production patterns and trade in goods and services), sustainable development, environmental law, valuation of natural capital and ecosystem services, externalities, environment and health, urban planning, forward looking analysis, scenario development, and integrated modelling.*

*The above list is neither an exhaustive list nor a list that the tenderers shall comply with. The tenders could suggest areas of expertise that they, themselves, deem necessary for the monitoring and evaluation of the 7EAP (in line with its nine priority objectives and its long term vision).*
