

Key GHG data <sup>(1)</sup>	1990	2008	2009	2010	2011 <sup>(2)</sup>	2012	1990–2011	2010–2011 <sup>(2)</sup>
Average 2008–2012 target under the Kyoto Protocol (Mt CO <sub>2</sub> -eq.)		134.8	134.8	134.8	134.8	134.8		
Total GHG emissions (Mt CO <sub>2</sub> -eq.)	143.3	136.7	125.2	132.5	121.3	n.a.	-15.3%	-8.4%
GHG from international bunkers <sup>(3)</sup> (Mt CO <sub>2</sub> -eq.)	16.4	35.3	26.6	25.2	n.a.	n.a.	n.a.	n.a.
GHG per capita (t CO <sub>2</sub> -eq. / capita)	14.4	12.8	11.6	12.2	11.1	n.a.	-23.1%	-9.3%
GHG per GDP (constant prices) <sup>(4)</sup> (g CO <sub>2</sub> -eq. / euro)	637	422	398	412	370	n.a.	-41.8%	-10.1%
Share of GHG in total EU-27 emissions (%)	2.6 %	2.7 %	2.7 %	2.8 %	2.6 %	n.a.	2.8%	-6.0%
EU ETS allocated allowances (free + auctioning)		55.4	56.8	56.0	56.0	n.a.		0.0%
EU ETS verified emissions - all installations <sup>(5)</sup> (Mt CO <sub>2</sub> -eq.)		55.5	46.2	50.1	46.2	n.a.		-7.8%
EU ETS verified emissions - constant scope <sup>(6)</sup> (Mt CO <sub>2</sub> -eq.)		55.2	46.0	46.7	41.4	n.a.		-11.3%
Share of EU ETS verified emissions (all install.) in total GHG (%)		40.6 %	36.9 %	37.8 %	38.1 %	n.a.		0.7%
ETS verified emissions compared to annual allowances <sup>(7)</sup> (%)		100.1%	81.4%	89.5%	82.6%	n.a.		-7.8%
GHG emissions in the non-ETS sectors		81.2	79.0	82.4	75.1	n.a.		-8.8%
Equivalent annual target for non-ETS GHG emissions		79.4	78.0	78.8	78.8	n.a.		0.0%

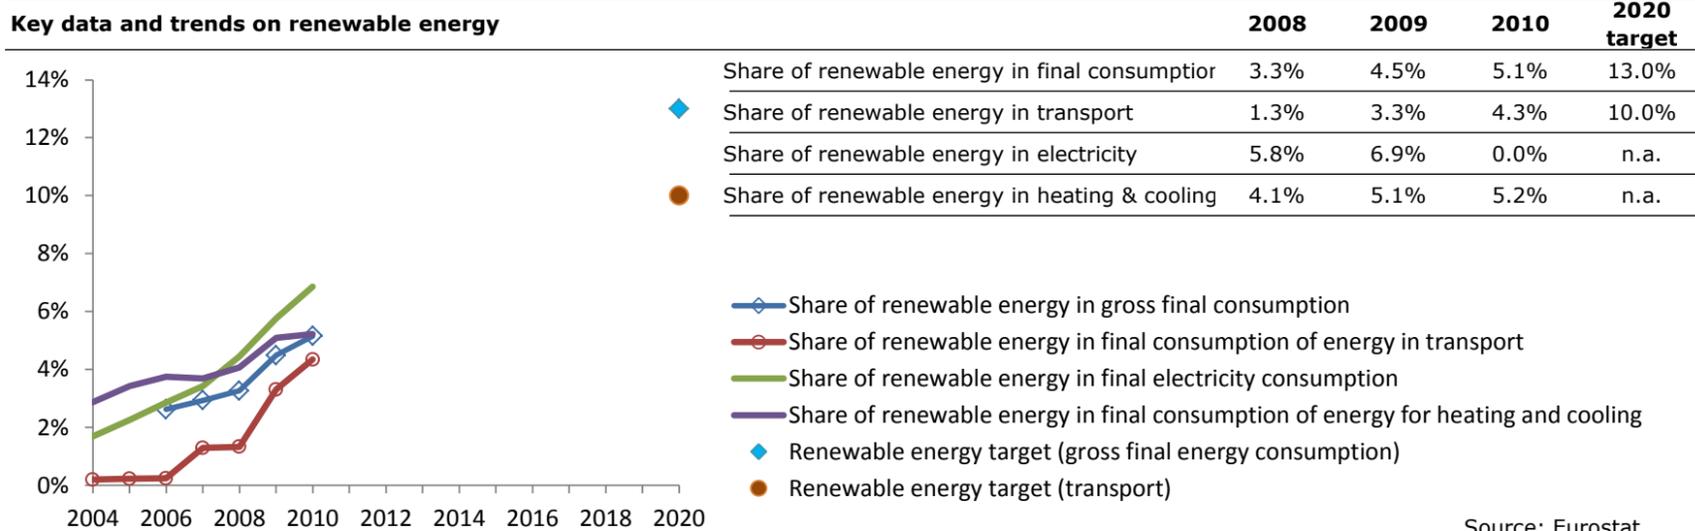

Share of GHG emissions (excluding international bunkers) by main source and by gas in 2010 <sup>(1)</sup> <sup>(8)</sup>

Assessment of short-term GHG trend (2009–2010)

Compared to 2009, 2010 emissions increased by 5.8 %. Fuel related emissions from manufacturing industries and process related emissions from chemical industry and metal production increased most, mainly reflecting the recovery from the economic crisis. The significant increase in emissions from households were most likely caused by a relatively cold winter and the resulting higher demand of heating. The emission increases were partly offset by a continuing decline in emissions from road transportation.

Greenhouse gas emission data and EU ETS data

[www.eea.europa.eu/themes/climate/data-viewers](http://www.eea.europa.eu/themes/climate/data-viewers)

<sup>(1)</sup> Total greenhouse gas emissions (GHG), GHG per capita, GHG per GDP and shares of GHG do not include emissions and removals from LULUCF (carbon sinks) and emissions from international bunkers.

<sup>(2)</sup> Based on EEA estimate of 2011 emissions.

<sup>(3)</sup> International bunkers: international aviation and international maritime transport.

<sup>(4)</sup> Gross domestic product (GDP) in 2005 market prices - not suitable for a ranking or quantitative comparison between countries for the same year. GDP information for the year 1990 is not available for some countries. For this reason, the 'GHG per GDP' values presented in the '1990' column correspond to the following years: 1991 (EU-15, Bulgaria, Germany, Hungary and Malta), 1992 (Slovakia), 1993 (EU-27 and Estonia) and 1995 (Croatia). Source GDP: Annual macro-economic database (AMECO), European Commission, 2012.

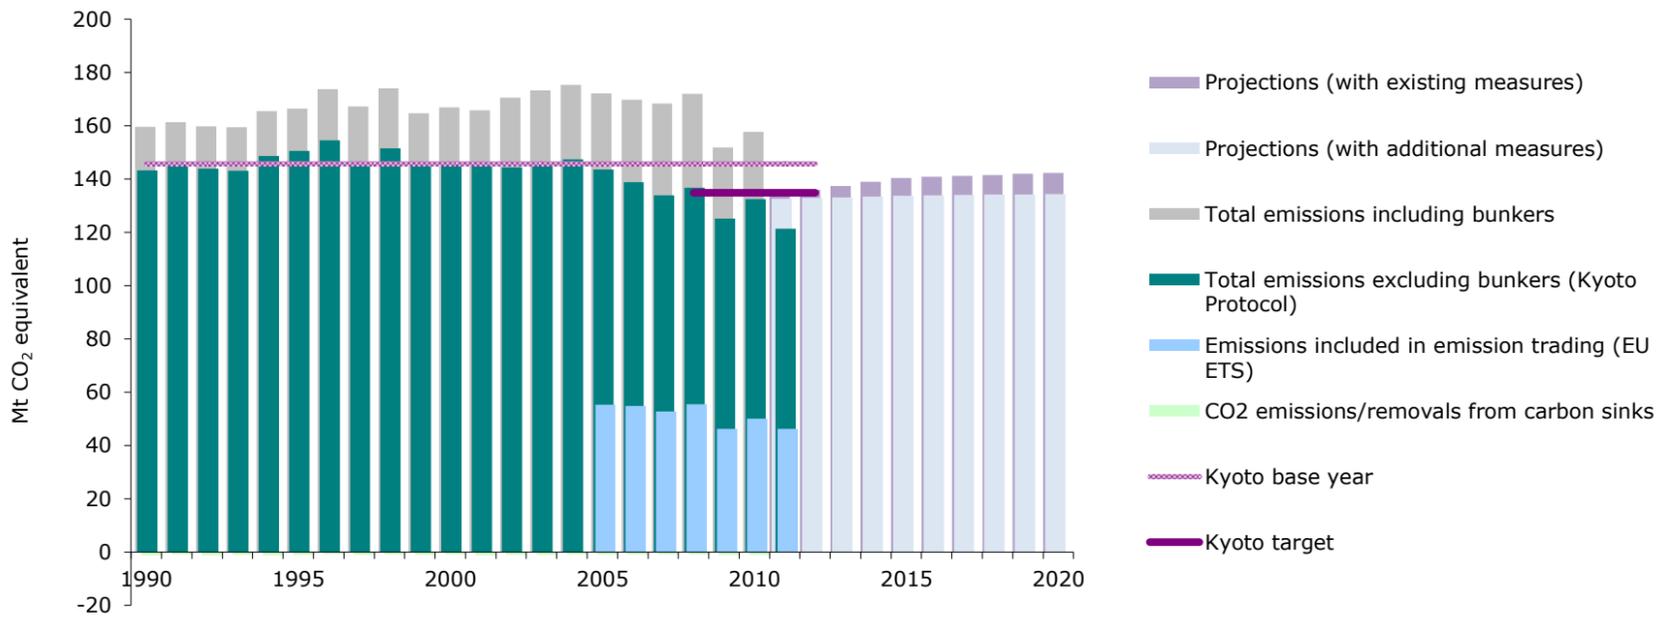

<sup>(5)</sup> All installations included. This includes new entrants and closures. Data from the community independent transaction log (CITL) as of 31 July 2012. The CITL regularly receives new information (including delayed verified emissions data, new entrants and closures) so the figures shown may change over time.

<sup>(6)</sup> Constant scope: includes only those installations with verified emissions available for 2008, 2009, 2010 and 2011.

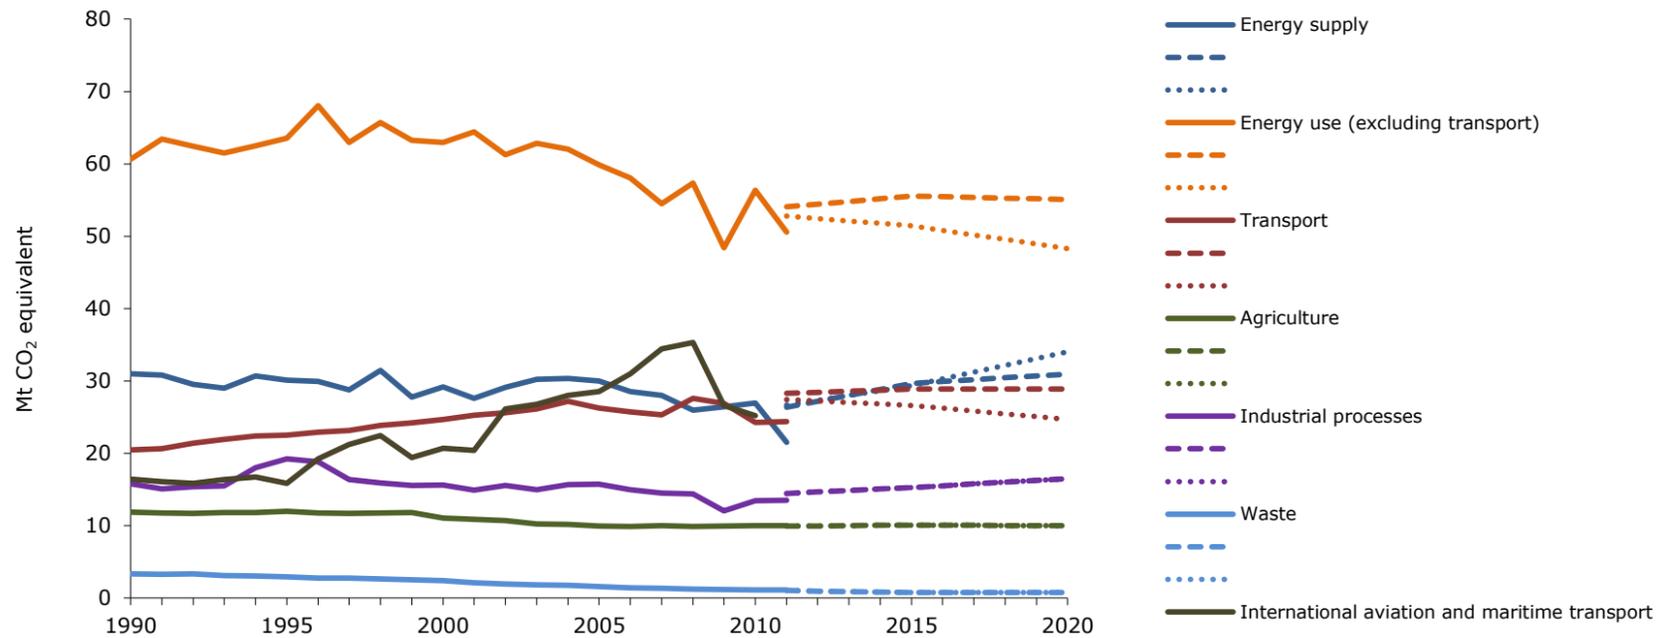

<sup>(7)</sup> "+" and "-" mean that verified emissions exceeded allowances or were below allowances, respectively. Annual allowances include allocated allowances and allowances auctioned during the same year.

<sup>(8)</sup> LULUCF sector and emissions from international bunkers excluded. Due to independent rounding the sums may not necessarily add up.

**GHG trends and projections 1990–2020 – total emissions**

**GHG trends and projections 1990–2020 – emissions by sector**

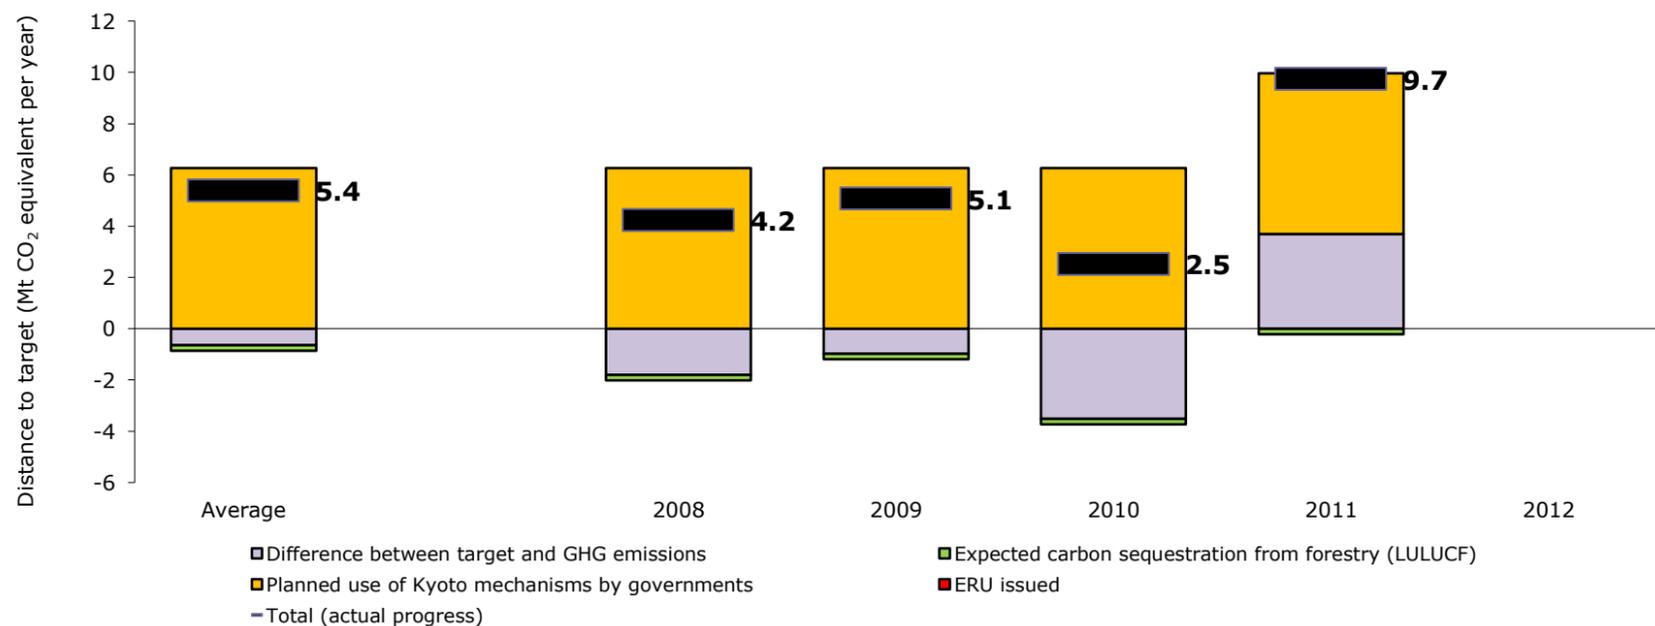

Note: GHG emission projections are represent either through dashed lines (with existing measures) or dotted lines (additional measures).

**Progress towards Kyoto target**

Average 2008–2011 emissions in Belgium were 11.5 % lower than the base-year level, below the burden-sharing target of -7.5 % for the period 2008–2012. However, in the sectors not covered by the EU ETS, emissions were higher than their respective target, by an amount equivalent to 0.4 % of base-year emissions. LULUCF activities are expected to increase net emissions by an annual amount equivalent to 0.1 % of base-year level emissions. Belgium intends to use the flexible mechanisms at government level by acquiring an amount of Kyoto units equivalent to 4.3 % of base-year emissions per year. Taking all these effects into account, average emissions in the sectors not covered by the EU ETS in Belgium were standing below their target level, by a gap representing 3.7 % of the base-year emissions. Belgium was therefore on track towards its burden-sharing target by the end of 2011.

Note: The difference between target and GHG emissions concerns the sectors not covered by the EU ETS. A positive value indicates emissions lower than the average target.
